

# Download Boeing 747 Technical Documents

Airport Compatibility Airplane Characteristics for Airport Planning These documents provide, in an industry-standardized format, airplane characteristics data for general airport planning. Boeing provides broad spectrum of technical data and records management services and solutions to ensure maintenance and engineering personnel have timely access to essential technical publications and effective training materials. The Boeing 747-400 is a four-engined long-range widebody airliner with a capacity of maximum 660 passengers in a partial double deck configuration produced by the American manufacturer Boeing Commercial Airplanes. The 747-400 was also produced as a cargo freighter. In January 2004, Boeing and Cathay Pacific launched the Boeing 747-400 Special Freighter program, later referred to as the Boeing Converted Freighter (BCF), to modify passenger 747-400s for cargo use. The first 747-400BCF was redelivered in December 2005.
