Buy Cartan for Beginners: Differential Geometry Via Moving Frames and Exterior Differential Systems (Graduate Studies in Mathematics) on Amazon.com FREE SHIPPING on qualified orders Two central aspects of Cartan's approach to differential geometry are the theory of exterior differential systems (EDS) and the method of moving frames. This book presents thorough and modern treatments of both subjects, including their applications to both classic and contemporary problems in The book unites differential geometry and partial differential equations via Elie Cartan's method of moving frames and the theory of exterior differential systems (EDS). The text may be used as a semester or year-long course with different possible emphases including differential geometry, EDS with PDE applications, moving frames in algebraic geometry and differentiable manifolds. Two central methods in Cartan's geometry are the theory of exterior differential systems and the method of moving frames.
