

# Download Cave Art And Climate Change

Researchers have attributed broader changes to the region's seasonal monsoon to climate change. The oldest date given to an animal cave painting is now a bull dated circa as over 40 000 years, at Lubang Jeriji Saléh cave, East Kalimantan, Borneo, Indonesia. Before this discovery, the oldest known cave painting was a depiction of a pig with a minimum age of 35,400 years, at Timpuseng cave in Sulawesi, Indonesia. Climate change is a change in the statistical distribution of weather patterns when that change lasts for an extended period of time (i.e., decades to millions of years). When we hear the term “climate change,” we often think of its negative impact on animals, plants, and mankind. However, we fail to realize that it’s not only the living that are threatened by changes in the climate.
