

Download Common Pitfalls In The Evaluation And Management Of Headache

On the other hand, in the setting of acute infarction, it is possible to have regions of tissue that show decreased CBF with maintained CBV indicating potentially salvageable tissue or penumbra. A migraine is a primary headache disorder characterized by recurrent headaches that are moderate to severe. Typically, the headaches affect one half of the head, are pulsating in nature, and last from two to 72 hours. Associated symptoms may include nausea, vomiting, and sensitivity to light, sound, or smell. The pain is generally made worse by ...Headache is the symptom of pain anywhere in the region of the head or neck. It occurs in migraines (sharp, or throbbing pains), tension-type headaches, and cluster headaches. Frequent headaches can affect relationships and employment. There is also an increased risk of depression in those with severe headaches. Die Serotonin-5-HT_{1B/1D}-Rezeptoragonisten (sog. Triptane) Almotriptan, Eletriptan, Frovatriptan, Naratriptan, Rizatriptan, Sumatriptan und Zolmitriptan sind die Therapie erster Wahl bei mittelschweren und schweren Migräneattacken, die nicht oder nicht ausreichend auf eine Therapie mit Analgetika oder nicht steroidalen Antirheumatika ansprechen.
