Concurrent computing is a form of computing in which several computations are executed during overlapping time periods—concurrently—instead of sequentially (one completing before the next starts). According to Carl Hewitt, unlike previous models of computation, the actor model was inspired by physics, including general relativity and quantum mechanics [citation needed]The Free Lunch Is Over A Fundamental Turn Toward Concurrency in Software. By Herb Sutter. The biggest sea change in software development since the OO revolution is knocking at the door, and its name is Concurrency. The Java programming language provides multiple mechanisms for communicating between threads. The most basic of these methods is synchronization, which is implemented using monitors.
