Extractive metallurgy. Following separation and concentration by mineral processing, metallic minerals are subjected to extractive metallurgy, in which their metallic elements are extracted from chemical compound form and refined of impurities. This bar-code number lets you verify that you're getting exactly the right version or edition of a book. The 13-digit and 10-digit formats both work. With decades of experience in pyrohydrolysis, calcination, sintering, and roasting, CMI Industry offers a full range of innovative solutions from initial feasibility studies and pilot plant trials, to full scale plants.
