I am a writer in Dallas gathering material for a history of the cane, from its ancient origin (perhaps in the walking stick) to its cultural meaning as an emblem of wealth and authority, to its use as a prosthesis and its future evolution. A coarse and strong fibre, sisal is being increasingly used in composite materials for cars, furniture and construction as well as in plastics and paper products. Comparing balsa and polymeric woods. Researchers in China have developed a new way to make life-like artificial wood on a large scale from a polymer called resol, which is very similar to lignin (the compound found in natural wood). The scientific method is an empirical method of knowledge acquisition which has characterized the development of science since at least the 17th century.
