La prognosi varia tra le persone e sia la conta dei CD4 che la carica ...Human immunodeficiency virus (HIV) is a blood-borne virus typically transmitted via sexual intercourse, shared intravenous drug paraphernalia, and mother-to-child transmission (MTCT), which can occur during the birth process or during breastfeeding.Purpose. The purpose of this chapter is to provide recommendations and guidelines for prescribing PEP following non-occupational exposure to HIV (nPEP).Introduction. Since the emergence of AIDS in 1981, an association between HIV infection and the development of specific cancers has been recognized.
