The theoretical foundations of Neural Networks and Analog Computation conceptualize neural networks as a particular type of computer consisting of multiple ...In recent years, deep artificial neural networks (including recurrent ones) have won numerous contests in pattern recognition and machine learning. Algorithm design refers to a method or mathematical process for problem-solving and engineering algorithms. The design of algorithms is part of many solution theories of operation research, such as dynamic programming and divide-and-conquer. Footnotes. 1. The Aunt Bubbles machine refutes something stronger than behaviorism, namely the claim that the mental "supervenies" on the behavioral; that is, that there can be no mental difference without a behavioral difference.
