On the economics of solar energy : the public-utility interface. [Stephen L Feldman; Robert M Wirtshafter]Abstract. A methodology is developed to help the homeowner choose among solar space-conditioning and water-heating technologies, at the same time considering the utility role as a possible competitor and supplier of auxiliary power.A more critical analysis of the economic feasibility of solar energy is called for than the government's incentive program to reduce oil and gas consumption. The interface between solar space conditioning and waterheating and the electric utilities is examined to identify the potential tradeoffs; to
