

# Download Principles And Practice Of Obstetric Anaesthesia

This tutorial will detail the factors that determine how local anaesthetic spreads within the CSF therefore determining the extent of the block. The CSF of the vertebral canal occupies the narrow (2-3 mm deep) space surrounding the spinal cord and cauda equina, and is enclosed by the arachnoid mater

**Compulsory Placement Required:** You are encouraged to contact the Coordinator of this specialty area to discuss your application, as your ability to undertake the core practice units of the specialty is dependent on the availability of professional experience (clinical practice) placements in your area.
