

Download The Thinking Child Brain Based Learning For The Early Years Foundation Stage

For over ten years the FSF has been a platform for a passionate and vibrant community of EYFS professionals, including nursery practitioners, childminders, reception teachers, advisers and consultants, and educators and writers. Child development entails the biological, psychological and emotional changes that occur in human beings between birth and the conclusion of adolescence, as the individual progresses from dependency to increasing autonomy. Thought encompasses an “aim-free flow of ideas and associations that can lead to a reality-oriented conclusion.” Although thinking is an activity of an existential value for humans, there is no consensus as to how it is defined or understood. Healthy early brain development from birth to age 3. During the first three years of life, children go through a period of “prolonged helplessness,” dependent on others for safety, survival, and socialization (Gopnik 2016).
