In his provocative new book, Martin Morf argues that the severe productivity problems being experienced in Western economies—particularly in the United States—result from an entrenched perceived dichotomy between work and life in our society. Further, Morf asserts, social problems such as lack of training and demand for skilled labor are a result of this dichotomy. A new book, *The Work/Life Dichotomy*, explores the redesign of mundane jobs; studies the trends in work/life relationships; and examines the link between training and the supply and demand of skilled and unskilled labor.
